SKILL

Wordpress	JavaScript	Tailwind CSS
HTML	Bootstrap	Figma, PSD, Ai, Sketch, JPG,
CSS	Jquery	expert

PROFESSIONAL EXPERIENCE

MLM Website

Sep 2024 - Present

"I built an MLM website with HTML, CSS, and JavaScript for the front-end design, and then integrated WordPress as a headless CMS. I used the free version of the Ultimate Membership Pro plugin, which automatically generated key pages like My Account, Login, and Registration, and allowed me to track registered members. However, due to limitations in the unpaid version, I added several custom features, such as referral creation and tracking, a payment system with record tracking, and a claim reward countdown. This feature rewards users based on the package they selected, adding the appropriate balance to their account. I also implemented a withdrawal option, allowing users to withdraw their earnings. The admin panel was designed to be scalable and user-friendly, and the referral commission system was tailored to each user's selected package.

Ecommerce Website

July 2024 - Aug 2024

"I developed an eCommerce website using WordPress, leveraging its flexibility and extensive plugin support for core functionality. For certain sections and pages, I used custom HTML, CSS, and JavaScript to add extra features and enhance the user experience. This allowed me to implement unique design elements, improve interactivity, and provide a more personalized shopping experience for users. By combining WordPress with custom coding, I was able to create a scalable, feature-rich platform tailored to the specific needs of the business."

Portfolio Website

Jun 2020 - July 2022

"This is the first website I created for myself, a portfolio website built using HTML, CSS, and JavaScript. To ensure responsiveness, I used Flexbox for layout adjustments, making it adaptable across different screen sizes. You can check out my project on my GitHub profile [here](#), where I have showcased the full website. It represents my early work and demonstrates my growing skills in web development."

EDUCATION & CERTIFICATIONS

Bachelor In Computer Science

Majors: Computer

EXTRACURRICULAR ACTIVITIES

Hobbies

As a passionate movie enthusiast, I enjoy exploring various genres and styles of filmmaking. I find great joy in analyzing storytelling techniques, cinematography, and the performances of actors. This hobby helps me develop critical thinking, creativity, and an appreciation for different cultures and perspectives through cinema.
